

Healing Harmonies: Music for Multiple Sclerosis

Please join us on Sunday, January 18, 2026 at 2 pm at the Performance Space at the Sayville Public Library, at 88 Greene Ave, Sayville, NY [\(631\) 589-4440](tel:6315894440)

Multiple Sclerosis (MS) is a neurological disorder in which the body's immune system mistakenly attacks the lining of nerve fibers in the brain and spinal cord. This can cause fatigue, numbness, weakness, poor coordination, vision problems, pain, and thinking and emotional difficulties. While there are many treatments now available, music is increasingly being used as a supplemental therapy.

Please join the Synaptic Groove Band's inspirational concert/lecture on the power of music to help address many symptoms of MS. Special guest lecturers: Dr. Maryana Liedke, True North Neurology MS Expert and a few words from the National MS Society representative.

The Synaptic Groove Band is under the musical direction of Paul Block and scientific direction of True North Neurologist Dr. Alan Ettinger. It also features renowned vocalist Kelsey Demsky, popular percussionist Rick Corwin and famous Bass player Bob Scollo. For further information about Synaptic Groove Band's concert/lecture series, please follow Synaptic Groove Band on Facebook.
